CIRCULAR

Plastic pollution is currently one of the biggest environmental challenges. The short-term benefits and convenience of plastic and plastic goods have led to a boom in the production and consumption of plastic. Over the past century, excess consumption of plastic has surpassed management of plastic waste and led it to become a threat ecological balance of the planet.

Plastic is menace that impacts not environment as well as our health and well being. We all have to contribute to find an answer to this problem. Knowingly or unknowingly we must work to reduce and try to eliminate plastic pollution.

In the view of above we are celebrating World Environment day on 5th June of every year at Globally

The Principal and management have taken the initiation and decided to take an action against the usage of plastic in the campus and gave awareness to the adverse effects of usage of mastic in the college. So, I request all the Department Faculties and Students to cooperate us to actively contribute to the efforts of banning the use of plastic.
