library management system (LMS) is an enterprise resource planning system for a library, used to track items owned, orders made, bills paid, and patrons who have borrowed.

Our LMS comprises a relational database, software to interact with that database, and two graphical user interfaces (one for patrons, one for staff). A major resource sharing library network “ DELNET “ is available which provides an array of facilities.

DELNET is offering inter-Library loan & Document Delivery Services to its member libraries.

Each LMS have separate software functions into discrete programs called modules, each of them integrated with a unified interface. Our modules include:

- acquisitions (ordering, receiving, and invoicing materials)
- cataloging (classifying and indexing materials)
- circulation (lending materials to patrons and receiving them back)
- serials (tracking magazine, journals, and newspaper holdings)
